TO WHOM SO EVER IT MAY CONCERN

We have installed "Reliable" H.T. 2 in 1 (Combo unit of Distribution Transformer & Stabiliser) of 400 kVA in our sanand works since Sept'2018..

Infact, we have total 8 Plants on All Over India basis.. We have installed H.T. 2 in 1 (Combo unit of Distribution Transformer & Stabiliser) of different capacity..

We have never faced any voltage fluctuation problem after installing H.T.Transformer with Built in AVR (2 in 1)..

We strongly recommend power sensitive buyers to install H.T.Transformer with built-in AVR (2 in 1) instead of OLTC type H.T. Distribution Transformer..

With installation of same, we have been benefited for,

- Smooth & stable voltage supply
- Machine maintenance problem has been minimized
- Power Consumption has been reduced

If anyone wanted to take feedback then do not hesitate to contact us..
